

AZseed Japan Inc.

Company Profile

We want to be the seed of
"Azumashii" for everyone.

The word "azumashii" is a dialect
It is a dialect used mainly in Hokkaido and Aomori.
It means "pleasant" or "comfortable".

We want to be a "seed" that delivers
"pleasant" and "comfortable" to everyone.

We want to spread "Azumashii" throughout the world.

This company was born with this in mind.

Many of the detergents and cleaning agents we use on a daily basis contain petroleum compounds and chemicals.

Most of the pollution in rivers and oceans is caused by domestic wastewater from households. In the world, 90% of domestic wastewater is discharged untreated, mainly in developing countries.

Polluting the water will eventually introduce pollutants into our bodies.

Our products are made from plant-derived raw materials and are friendly to both people and the environment. It breaks down and removes stains and odors without scrubbing, making it gentle on the skin and easy to clean. Furthermore, just by using it, you can clean up sludge in drains and pipes, and clean up rivers and oceans beyond. We believe that if we all use our products together, we can make the global environment "azumashii" in the future.

The only ingredients are natural enzymes and water.

The AZspread series is made exclusively from plant-derived enzyme groups and deep sea water from the Sea of Japan, developed by an industry-academia-government project team that includes Shinshu University.

Enzymes are a type of protein. It is the material from which the body of an organism is made. They are essential for living organisms to survive.

One enzyme can only work on one substance.

AZspread is designed to work efficiently by adjusting the ratio of enzymes for each application.

The main components of dirt and odor are carbohydrates, fats, ammonia, and proteins.

Both dirt and odors are decomposed into carbon dioxide gas and water, making it friendly to both people and the environment.

The ingredients are plant-derived enzyme groups extracted from papaya and coconut, so they are safe to use.

Products

AZspread Series

AZspread Cleaning
- wipe with only natural enzymes
500ml/1L/4L / 20L

- No fragrances, preservatives,
synthetic surfactants, fluorescent dye
compounds, and petroleum-based
raw materials are not used.

People-friendly and Earth-friendly

AZseed Japan Inc. Representative Director Kahoko Kinoshita

Many compounds are contained in the things around us. Even things that touch the skin or are put in the mouth are no exception. As I myself have suffered from itching and eczema of unknown cause as I have gotten older, I have become more and more aware of those compounds. That is when I came across this bath salt. Its bath salts are made from a group of plant-derived enzymes and are made entirely from natural ingredients.

It's not something that you use once and immediately feel the benefits. It is not something that resonates with everyone. However, after using and seeing the product myself, I strongly felt that there are people who definitely need this product.

This product is also environmentally friendly, but nature is not the only environment that surrounds people. In order to change this world into a more comfortable one, we value the "people" involved, both inside and outside the company, and will continue to make tireless efforts to be an "Azumashii" company for everyone.

We will strive to be involved with many people, to sow the seeds of a comfortable world together, and to make many flowers bloom. We will also strive to sow many new seeds.
